Maximum Marks	2 Marks

Customer Problem Statement Template

Problem statement format: I am [customer] / I'm trying to [goal] / But [barrier] / Because [reason] / Which makes me feel [emotion].

Project Context: The project automates service-ticket classification and routing using Flow Designer so that incoming tickets can be categorized and assigned to the appropriate support team with less manual effort.

Problem Statement (PS)	I am (Customer)	I'm trying to (Goal)	But (Barrier)	Because (Reason)	Which makes me feel (Emotion)
PS-1	a support agent	classify and route incoming tickets quickly	many tickets need manual category and assignment	issue descriptions vary and tickets arrive in high volume	overloaded and frustrated by repetitive work
PS-2	an employee raising a ticket	get my issue to the correct team without delay	incorrect classification can send the ticket to the wrong queue	manual decisions may be inconsistent	uncertain and frustrated when resolution is delayed
PS-3	a service-desk manager	maintain consistent ticket handling and SLA performance	manual classification makes monitoring and routing difficult	different agents may use different categories or priorities	concerned about delays and inconsistent service

Defined Core Problem

Service-desk teams need an automated way to classify and route incoming tickets because manual categorization is time-consuming and can lead to incorrect assignment, delays and inconsistent handling. The solution should use Flow Designer to classify tickets from their details and automatically trigger the appropriate routing and notification actions.

Expected Outcome

- Reduce manual ticket classification effort.
- Improve routing accuracy and consistency.
- Speed up assignment to the appropriate support team.
- Support faster resolution and better SLA tracking.
